Cσnductivity — CRM Setup Guide for KPIs §17.1 and §17.2

23 October 2026 · For HubSpot or Zoho CRM · Pairs with the website's form system (§13)

> **How it fits together:** the website already sends every form submission as a tidy package (lead) to one address, `CRM_WEBHOOK_URL`. You connect that address to the CRM (step 4), the CRM creates the records, your team moves each record through the stages below, and the 13 KPI reports in section 6 count everything automatically.

> **Check your plan first.** Free CRM plans limit custom fields, pipelines, custom objects and custom reports. The setup below needs, roughly: **HubSpot Starter** (two pipelines, custom reports) or **Zoho CRM Standard** (custom modules, reports and dashboards). Confirm current plan features with the vendor before buying.

1. Employer pipeline (§13.1) → KPIs 17.1

Create one sales pipeline named **Employer Pipeline**: a **Deal** in HubSpot, a **Deal / Potential** in Zoho. One deal = one employer requirement. "Visitor" happens on the website, so the CRM starts at Inquiry.

#	Stage	Move a deal here when…	Win probability*
1	Inquiry	Created automatically from the website employer form	5%
2	Qualified Lead	Team confirms it is a real organization with a real, relevant need	15%
3	Discovery	A consultation or Talent Pipeline Diagnostic is booked or held	30%
4	Proposal	A written proposal is sent; enter **Deal amount** (potential commercial value)	50%
5	Client *(Closed won)*	Proposal accepted	100%
6	Active Requirement	Work on a specific requirement has started	100%
7	Delivery	Candidates presented, training delivered or advice in progress	100%
8	Repeat Business	The same organization opens another requirement (create a new deal on the same company)	100%
—	Closed lost	Not qualified, declined or no response; pick a **Lost reason**	0%

* Suggested starting values; adjust after a few months of real data.

2. Talent pipeline (§13.2) → KPIs 17.2

Keep talent separate from sales. **HubSpot:** a **Ticket pipeline** named **Talent Pipeline** (one ticket per registrant). **Zoho:** a custom module **Talent Profiles** with a **Talent stage** field, or a separate layout on Contacts.

Talent stage	Move here when…
Registered Interest	Created automatically from the talent form
Initial Profile	Profile completed (CV, education, preferences checked)
Assessment / Readiness	An assessment is booked or done
Development	In training, mentoring or a readiness program
Opportunity Consideration	Put forward or interviewing for a real opportunity
Deployment	Placed, hired or started a project
Continued Engagement	Post-placement follow-up, alumni

Talent status (dropdown, separate from stage)
Exploring careers
Developing readiness
Available for opportunities
Actively training
Placed or deployed
Alumni community

Never set "Available for opportunities" automatically: registrants are not verified or deployable until the team checks (§13.2).

Readiness Activities (for assessments, training, mentoring, milestones)

Create a record type **Readiness Activity** (HubSpot: custom object; Zoho: custom module) linked to the talent record, with fields: **Type** (Assessment / Training / Mentoring / Program), **Date completed**, **Verified** (Yes/No: "Yes" only when assessed or confirmed by Conductivity, not self-reported), **Milestone** (text), **Program** (link to Program record). Lower-cost alternative: log these as activities or tasks of a set type on the talent record.

3. Fields to create

Record	Field (label)	Type	Used for
Company / Account	Industry · Country · Organization key	Dropdown · Dropdown · Text	Industry and geography reporting; matching repeat employers
Contact	Designation · Audience · Lead source page · Campaign source · Campaign name · Content assisted · Marketing consent	Text · Dropdown · Text · Text · Text · Yes/No · Yes/No	Channel and cost-per-lead reporting; consent
Employer deal	Requirement · Positions/scale · Timeline · Interest · Owner · Next action date · Lost reason	Long text · Text · Dropdown · Dropdown · User · Date · Dropdown	13.1 tracking; 17.1 KPIs
Talent record	Career stage · Education · Support wanted · Interests · Aspirations · Talent status · Placement date · Follow-up 3/6/12 months	Dropdown · Dropdown · Dropdown · Text · Long text · Dropdown · Date · Dropdowns	13.2 tracking; 17.2 KPIs
Partnership	Partner type · Objective · Target group · Expected outcomes · Contribution	Dropdown · Long text ×4	Partnership inquiries

4. Connect the website (about 1 hour)

1. In **Zapier** or **Make**, create a scenario that starts with **Webhooks → Catch hook**. Copy the address it gives you.
2. In Vercel → Project → Settings → Environment Variables, add `CRM_WEBHOOK_URL` = that address, then redeploy.
3. Submit one test form of each type on the site so the webhook learns the data shape.
4. Add steps by `audience`:
   - **employer** → find or create Company (match on `organizationKey`, else name) → find or create Contact (match on `dedupeKey` = email) → create Deal in **Employer Pipeline** at **Inquiry**, owner = `owner`.
   - **talent** → find or create Contact → create Ticket (HubSpot) or Talent Profile (Zoho) at **Registered Interest**; restrict visibility (step 5).
   - **partner** → Company + Contact + Partnership record. **contact / newsletter / preferences** → Contact + note; preferences go to the data protection owner as a task.
5. Map fields using the table below.

Website lead field (JSON)	CRM field
`reference`	Note or "Website reference" text field on the deal/ticket
`records["Employer / Organization"]`: organization, industry, country	Company name, Industry, Country
`records["Employer Contact"]`: name, designation, email, phone	Contact first/last name, Designation, Email, Phone
`records["Talent Requirement"]`: interest, requirement, scale, timeline, context	Deal: Interest, Requirement, Positions/scale, Timeline, Description
`records["Talent Profile"]`: stage, education, support, interests, aspirations	Talent record: Career stage, Education, Support wanted, Interests, Aspirations
`records["Partnership"]`: type, objective, target, outcomes, contribution	Partnership fields
`stage` · `owner` · `department`	Pipeline stage · Record owner · Team
`source` · `campaign.utm_source` · `campaign.utm_campaign` · `campaign.contentAssisted`	Lead source page · Campaign source · Campaign name · Content assisted
`marketingConsent` · `sensitivity`	Marketing consent · (restricted → apply talent visibility rules)

5. Access and data rules (§13.3, §16)

- Talent records and Readiness Activities: visible only to the Talent Operations team (HubSpot: team-based permissions; Zoho: profiles and roles).
- Never attach talent profiles to employer deals without the candidate's recorded permission.
- Set a retention rule (e.g. review inactive talent records after an agreed period) once management and legal agree the period.

6. The 13 KPI reports

Build each as a saved report, then add all to two dashboards: **Employer Acquisition** and **Talent Development**. Default period: monthly, with a 12-month trend.

Employer Acquisition dashboard (§17.1)

KPI	Report on	Filter / formula	Chart
Qualified employer inquiries	Employer deals	Count entering **Qualified Lead** in period (use stage history / "date entered stage")	Monthly bar
Consultation bookings	Employer deals	Count entering **Discovery**; conversion = Discovery ÷ Inquiry in period	Bar + %
Proposal opportunities	Employer deals	Count and total **Deal amount** entering **Proposal**	Bar (count) + value
Proposal-to-client conversion	Employer deals	Deals reaching **Client** ÷ deals reaching **Proposal** (same cohort)	Funnel
Cost per qualified lead	Deals + campaign spend	Spend per **Campaign source** ÷ qualified leads with that source (enter monthly spend per channel in the CRM's campaign tool or a sheet)	Table by channel
Repeat employer requirements	Companies	Companies with ≥ 2 deals that reached **Client** or later	Number + list

Talent Development dashboard (§17.2)

KPI	Report on	Filter / formula	Chart
Relevant talent registrations	Talent records	Created in period with audience = talent (exclude duplicates and spam)	Monthly bar by career stage
Completed professional profiles	Talent records	Count entering **Initial Profile**; % of registrations	Bar + %
Readiness assessments completed	Readiness Activities	Type = Assessment, Date completed in period	Monthly bar
Training and mentoring participation	Readiness Activities	Type = Training, Mentoring or Program; count distinct people	Stacked bar by type
Verified readiness milestones	Readiness Activities	Verified = Yes	Monthly bar
Interviews and deployments	Talent records	Count entering **Opportunity Consideration** and **Deployment**	Two bars
Post-placement outcomes	Talent records	Placed records with Follow-up 3/6/12 months = "Still in role / progressing"; % retained	% at 3, 6, 12 months

7. Setup checklist

1. Choose HubSpot or Zoho and the plan (check limits above).
2. Create the Employer Pipeline (section 1) and the Talent Pipeline (section 2).
3. Create the fields (section 3) and the Readiness Activity record type.
4. Set team permissions for talent records (section 5).
5. Connect the website with Zapier/Make and `CRM_WEBHOOK_URL`; map fields (section 4); test one form of each type.
6. Build the 13 reports and two dashboards (section 6).
7. Agree a weekly habit: owners update stages and "next action" every week, or the KPIs will be wrong.
